Facilitating Remote Access to Content
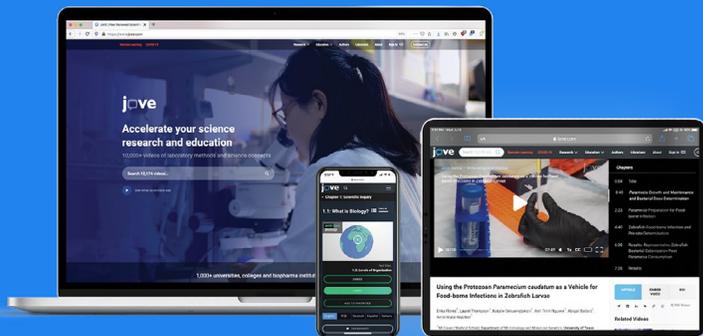

1 **Create an Individual JoVE Account**

Students and faculty can **create an account** with an institutional email to access JoVE videos off-campus.

2 **Google Single Sign-On**

If your school uses Gmail, you can use Google SSO (single sign-on) to log in. This allows you to remotely access JoVE content with your institution's Gmail credentials.

3 **Embed JoVE Videos in Your Online Courses**

JoVE videos can easily be embedded, either individually, or in bulk, in most learning management systems. Here are a variety of helpful **how-to documents** to walk you through setup in your system.

4 **Sign-On Using Shibboleth Or OpenAthens**

Students and faculty can use **Shibboleth or OpenAthens** to login to JoVE. Select your university from the drop-down menu and this will prompt you to sign in with your institutional email and password. If you require access, please get in touch with JoVE at **customersuccess@jove.com**.

5 **Authenticated Remote Access with EZproxy**

As with any electronic resource, authenticated remote access to JoVE content can be provided by EZproxy.

Any of these options will allow complete access to the institutional subscription provided by your library. Having any issues? Reach out to JoVE's Curriculum Specialists at customersuccess@jove.com or visit our Faculty Resource Center for additional information.
